GRID OFF!!!

Harness renewable energy and reduce your home energy bills

Find out how renewable energy sources like wind and solar power offer us ways to harness energy without compromising our climate, health and economy. The good news - converting sunshine into energy has become much cheaper much faster than anyone has ever predicted. In this session you will learn innovative and inexpensive ways to reduce your energy bills at your home. Topics will include solar, solar thermal, wind, and lighting.

Our speaker, **Elena Christopoulos**, has 20 years of expertise as an accomplished Energy & Sustainability Consultant who “walks the talk of sustainability.” In early 2000, she implemented the first urban wind turbine in North America. Located in downtown Toronto, it took more than 250 homes off the power grid. In 2013, Elena was named Toronto’s *Woman of the Year* for her work designing wind turbines in Canada, Greece, Germany, England, and the US. She travels between the US, Canada, and Europe working on and speaking about diverse alternative energy and clean tech projects.

When:

Tuesday, July 8, 2014 at 7:00 pm

Where:

All Saints Church
Guild Room
132 N. Euclid Ave., Pasadena, CA 91101
